Operation

When the input pressure is rising, the output pressure falls; conversely, falling input pressure produces rising output pressure. Variable pressures can also be applied to connections 1 and 6; this provides limitation of the output pressure.

Connection 1 is for maximum limitation (0,8 to 1,4 bar) and/or connection 6 is for minimum limitation (0 to 1,4 bar). The output pressure is then prevented from ever exceeding the pressure at connection 1, and will never be lower than the pressure at connection 6.
